LOST \$96 AT POKER GAME, CHARGE HE STOLE \$21 BACK.—Accused of \$22 one gun robbery in a St. W. 12, Brockville, 22, of Grimsby, telephone house from police station. Chief Constable Dun-

can Brown holds up pistol. At left officer takes report from three victims. Brockville, said he lost \$96 in a poker game at the club a week before. (S.N.S. Photo)

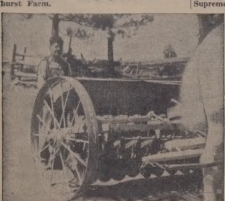

Devolving Full Time To Farming

Dr. L. Newman, former Dominion Cerealist, now retired, is devoting his full time to his farm on the Rideau river, about 40 miles from Ottawa. Dr. Newman thinks that farmers should do a little more experimenting to enable them to find out things to their own benefit in their farm operations. On Dr. Newman's 100 acres 20 are in oats, 25 in hay, 12 in silage corn and the remaining fields in pasture. The agricultural scientist said the main idea of the "Elmhurst Farm" is to find out how many registered Holsteins it can maintain in good condition by good management, at the same time keeping the fertility of the soil built up to a high level.

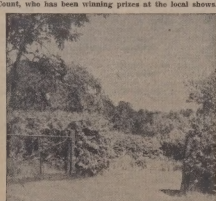

Milking cows coming up the lane at Elmhurst Farm.

Head of the Holstein herd at Dr. Newman's farm in Elmhurst, Supreme Court, who has been winning prizes at the local shows.

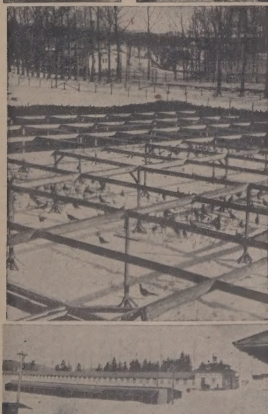

Farm manager M. McEwen returning to the barn after sowing fertilizer in a field of corn (5-12-39).

Well trimmed cedar hedges line the entrance to Dr. Newman's home.

Pheasants At Home In Canada

The Mongolian Ringneck pheasant, a native of the Orient, has made himself at home in Canada. Ringnecks have been liberated in Montreal, Drummondville and other Quebec districts with varying degrees of success and government interest in the project has developed. In these districts the birds are breeding naturally and modern incubation and brooding equipment has been acquired by the St. Francis Anglers and Hunters Assoc., of Drummondville. At left left is Brother Phileas of the Brothers of Charity in Drummondville holding one of the Ringnecks and at right young pheasants grow well amid the rows of sunflowers at Oka. Centre above is a winter scene at the Oka Pheasant Hatchery, directly above is another winter view of the poultry houses at Oka.

PLANE STOWAWAY.—Joe Corbett, 14, of Elmville, Ont., was discovered in the unheated tail compartment of a P.C.A. aircraft when the plane landed in La Guardia airport after its Malton-New York run. Officials placed him on the next plane back to Toronto and after a brief interview by immigration officials at Malton he was allowed to return home.—S.N.S. photo.

HEADS YOUNG LIBERALS.—William J. Treadwell of Winnipeg, who is the new president of the Young Liberals association. His successor Charles A. Dubucqeu of Montreal.

"FAME" CRANE.—The cranes at the lake near Nepean, N.B., are in friendly that they are often called "fame" cranes. This one, shown with its wings held outstretched by Vera E. Film, was found ill or wounded in some fashion and was quite content to allow himself to be taken care of until he recovered. Later he was taken back to the lake and released.—S.N.S. photo.

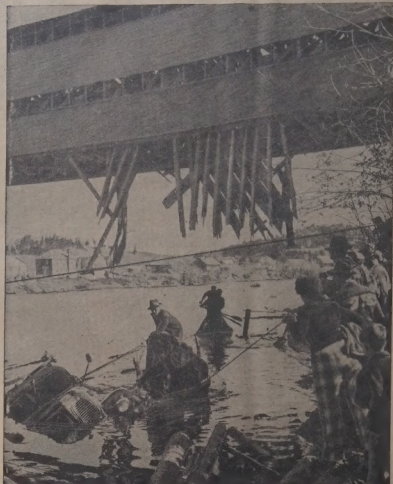

ADDRESSES C. OF C.—Herman W. Steinkamp, president of the U.S. Chamber of Commerce, told Canadian Chamber of Commerce, in an address at Montreal, that business needs friends and is the strength of nations. In the past, he said, businessmen have allowed others to come in and malign them without answering back.—S.N.S. photo.

NO LOSS TO U.S.A.—United States consumers do not lose one cent as a result of devaluation of the Canadian dollar. D. W. Ambidge, president of Abbott Paper and Paper Co., declared. He was commenting on an address of Paul W. Shafter (Rep. Mich.), made in the U.S. Congress attacking Canadian newspaper manufacturers.—S.N.S. photo.

HIGH TEMPERATURE.—The highest temperature recorded on earth was 126 degrees F. at Asmara, Libya, North Africa, on September 13, 1929, according to the U.S. Weather Bureau. Secularism is about 500 times as sweet as sugar. 2624

TRUCK CRASHES THROUGH BRIDGE.—Trapped in the cab, Yves Nilschke, 24, drowned when his 35-ton truck, loaded with logs, broke through the covered bridge over the Lièvre river near Notre Dame de la Galade, Que. His brother, George, 27, clung to log, and was rescued by fishermen.—S.N.S. photo.

DRAMA OPENS R.A. CONGRESS.—Dramatic presentation, "The Flame of the Evangel," launched the Salvation Army's 67th congress, held in Toronto recently. Col. R. T. Spenser, (right), talks to Capt. W. Reed, (left), who played part of William Booth. Capt. C. Halsey was "The Spirit of the Salvation Army."—S.N.S. photo.

FIRST TIME IN HISTORY.—Left: For the first time in its history, Middlesex County, Ont., planting match had a demonstration of mechanical sugar beet lifting. Left: Wm. Cooke's H. M. A. at work and right: The American Maid Seed-Treated sugar beet combine, owned by Fred Vasey.

4,500 Feet Straight Down

Ocean Diver Reports World Of Darkness.

Carnivores, Luminescent Fish

By TAMARA ANDREWS
(Cortland Press Canadian Correspondent)

BANTA CRUZ, Cal.—What happens down the ocean floor beyond 2,000 feet, which was the deepest man had descended? This was the question that Dr. William D. Banta was going to answer when he made his first 4,500-foot dive in a submersible to a steel "biotechnology" to the bottom of the Santa Cruz basin.

He knew that at the depths he planned to achieve, the pressure would be 150 times that of the surface, and darkness complete. But he did not consider much beyond a thousand feet, as the bottom of the basin is 6,000 feet or in a pinch 6,500 feet to speak.

Whether forms of life are to be seen at these depths, where pressure is 150 times that of the surface, are near darkness but with faint luminescent spots, or perhaps resembling distant bioluminescent organisms, is to be seen.

The finding of such a trip cannot be understood. The cable may break, sending the submersible to its doom on the bottom. No diving log has yet been designed to record the pressure at the depths, nor power of man could make a submersible descend to the depths without such a cable. A submersible must be designed to bring the quartz windows against some sensitive pressure. The submersible must be able to withstand the pressure at the bottom of the ocean. The testing of the steel cable, almost impossible in such lengths at 4,500 feet, was done by the length of the cable being pulled down to the bottom to break. Any length of cable in testing might on the oxygen pump and press fail.

With all these dangers, Banta was eager to make the dive. This ocean, he says, is a new and vast frontier. It is a new world of discovery, and he is a pioneer in this new world.

In preparation for making the dive, Banta had to make a pair of goggles. The light for viewing the bottom was to be a pair of goggles, and for making movies, a camera. The goggles were made of clear glass, with 70-watt bulbs mounted on either side of the 4 1/2 inch clear quartz window.

Use Two Ways!

Use two ways! The first way is to use the goggles as a pair of goggles. The second way is to use the goggles as a camera. The goggles were made of clear glass, with 70-watt bulbs mounted on either side of the 4 1/2 inch clear quartz window.

Up and down in front of the window, the light was to be a pair of goggles, and for making movies, a camera. The goggles were made of clear glass, with 70-watt bulbs mounted on either side of the 4 1/2 inch clear quartz window.

Dr. Horton checks bones of his ghost ship diving ball, the biotechnology

The dive was to take place in a submersible, a small boat of the Santa Cruz basin, selected as the deepest water under the channel. It was to be used in exploration, the submersible being at 2,500 feet, the light focused and went out. Banta found himself in complete darkness. "I do not mind confinement," he says, "I am not afraid of the dark," he says, "I am not afraid of the dark."

As soon as the biotechnology is perfect, Banta expects to be able to make a dive to the bottom of the ocean. He expects to be able to make a dive to the bottom of the ocean.

HEALTH

Says Adolescents Most Reasonable

The greatest contribution group-up to make to the mental, moral and physical health of the world is to view the "vicissitudes of the period as challenges rather than obstacles," writes Dr. J. H. Banta, a member of the staff of the Institute of Child Study, Harvard University, in a special issue of the Canadian National Health Magazine.

The greatest problem the adolescent faces today is the fact that we have come to think and deal with him as a problem, says Dr. Banta, who is Assistant Professor of Psychology, University of Toronto, and a member of the staff of the Institute of Child Study, Harvard University.

Some Eskimos Acquire Riches By Trading

By TRADING

TORONTO.—The Canadian Eskimo, now regarded as a soft touch who would trade a wife for a hand of fish-bones, has turned trader.

A. H. Gibson, stipendiary magistrate, says that Eskimos have acquired the trading habit and have become comparatively rich.

Gibson said he knew of one Eskimo called "Big" who had received a salary of \$200.00. Many others were known to have received salaries of \$100.00 and \$200.00.

This growing wealth has led the government on a program to educate the Eskimos in the use of money. The government is now trying to get the Eskimos to use money.

Gibson said the Eskimos were using money in the form of fish-bones. The Eskimos were using money in the form of fish-bones.

The Myth Of "Mummy" Wheat

(By H. J. Bunker In The Eastern of London)

FROM time to time the wheat grains and other seeds recovered from ancient tombs have been planted, and in spite of great antiquity, have grown to produce fine, healthy plants.

A few years ago an Englishman of unexampled honesty brought from Egypt some seeds which were undoubtedly genuine. He had been told that the seeds were 3,000 years old.

The Englishman had been told that the seeds were 3,000 years old. He had been told that the seeds were 3,000 years old.
